

# Innovazioni terapeutiche nel DIABETE:

evidenze & falsi miti

• **ROMA** The Hive Hotel  
10 luglio 2026

**DIBATTITO: L'importanza del controllo dei fattori di rischio  
cardio-metabolico con la terapia del diabete tipo 2**

Roberto Minutolo  
Università della Campania Luigi Vanvitelli

# Disclosures

Il prof. Roberto Minutolo dichiara di aver ricevuto negli ultimi due anni compensi o finanziamenti dalle seguenti Aziende Farmaceutiche e/o Diagnostiche:

- Amgen
- Astellas
- Astrazeneca
- Bayer
- Boehringer
- CSL Vifor
- Eli Lilly
- Novo Nordisk,

*Dichiara altresì il proprio impegno ad astenersi, nell'ambito dell'evento, dal nominare, in qualsivoglia modo o forma, aziende farmaceutiche e/o denominazione commerciale e di non fare pubblicità di qualsiasi tipo relativamente a specifici prodotti di interesse sanitario (farmaci, strumenti, dispositivi medico-chirurgici, ecc.).*

# Global, regional, and national burden of chronic kidney disease in adults, 1990–2023, and its attributable risk factors: a systematic analysis for the Global Burden of Disease Study 2023

GBD 2023 Chronic Kidney Disease Collaborators\*

Lancet 2025; 406: 2461–82

|                 | Prevalence                      |                                       |                                                                            |

**5 Tirzepatide induces dose-dependent UACR decline largely independent from ↓ B.W. and ↓ HbA1c**

A comparison of the effects of tirzepatide and dulaglutide on major kidney events in people with type 2 diabetes:  
pre-specified exploratory analyses of the SURPASS-CVOT trial

|                                                                                                                    | Tirzepatide<br>(n=1520) | Dulaglutide<br>(n=1403) | Hazard ratio<br>(95% CI) | p value |

| Annual rate of change in eGFR (slope), mL/min per 1.73 m <sup>2</sup> , mean (SE)                                  | -1.76 (0.10)            | -2.72 (0.11)            | ..                       | <0.0001 |
| Percentage change in UACR at 36 months, estimate (SE)                                                              | -47.51% (2.54)          | -32.09% (3.80)          | ..                       | 0.0004  |

6. Tirzepatide reduces the risk of hard kidney outcomes

- Composite kidney outcome 2:** defined as persistent macroalbuminuria, 2x serum creatinine and eGFR <45 mL/min per 1.73 m<sup>2</sup>, ESKD or death from kidney disease
- Composite kidney outcome 3:** defined as persistent reduction in eGFR ≥40%, ESKD or death from kidney disease
- Composite kidney outcome 4:** defined as persistent reduction in eGFR ≥50%, ESKD or death from kidney disease

# Tirzepatide reduces worsening of eGFR overtime: time to dialysis (estimated from post-hoc analysis of SURPASS-CVOT trial)

| Drug                       | Annual eGFR decline<br>(vs placebo) |
|----------------------------|-------------------------------------|
| Tirzepatide <sup>1</sup>   | 0.93 (0.65 to 1.22)                 |
| Semaglutide <sup>2</sup>   | 0.94 (0.62 to 1.26)                 |
| Dapagliflozin <sup>3</sup> | 0.93 (0.61 to 1.25)                 |
| Empagliflozin <sup>4</sup> | 0.75 (0.54 to 0.96)                 |
| Finerenone <sup>5</sup>    | 0.84 (0.02- to 1.67)                |
